PHP

Description: PHP is widely used for server-side web development, when a website frequently requests information from a server. As an older language, PHP benefits from a large ecosystem of users who have produced frame-works, libraries, and automation tools to make the programming language easier to use. PHP code is also easy to debug.

Common Uses: PHP is the code running content-oriented websites such as Facebook, WordPress, and Wikipedia.

Course ID:7

Course Duration: 40 Hours

Total Module: 22

Price: BDT7000
